
POST HOC, not a pre-registered test; the pd0 H1 verdict stays FAIL. TF_loc = far-field ramp T - T_f(S, p) at each column's ice base (a priori). (a) equals <TF>^2 = TF_eff^2 exactly, so its q is n(TF_eff)/2 (R23). 4 km core runs (s = 1, Tbot -0.5..1.5), last 6 months.
