

Ensemble at 4 km horizontal resolution; last 6 months (records 19-24) of each 2-year run. C = meltwater volume fraction (passive tracer, source -SHIfwFlx/rho_fw at the ice base, restored to 0 at x > 790 km). D_out = depth of the outgoing (u C > 0) tracer transport at x_front, transport weighted (pd0 H2). Open markers: Tbot = 2.0, Exp. 3 test data, not used in H2.
